An introduction to CPD

➤ Vehicles designed with your working environment in mind.

When the community relies on you, you need a commercial vehicle specialist you can count on.

And that's exactly why you need CPD.

As the name behind some of Britain's most innovative refuse collection and winter road maintenance solutions, we've built our reputation on delivering reliability, quality, innovation and trust.

From our highly capable Titan and Semat RCVs to our renowned Telstar salt spreaders, our vehicles incorporate the latest fuel-saving innovations, low maintenance designs and intelligent, user-friendly features.

Put simply, choosing CPD to supply and maintain your fleet means genuine peace of mind.

Ever since our business was established, we've worked hard to combine our considerable engineering expertise with truly outstanding service.

We are the only UK-based commercial vehicles specialist to build RCVs, food waste vehicles and highway gritters.

Our relationships with leading commercial vehicle manufacturers, including Mercedes-Benz and DAF, enable us to offer the very best combinations of chassis and bodies.

Our constant drive to deliver greater performance and efficiency has resulted in innovations such as a 14-second compaction cycle at just 890rpm from our Titan RCV, and a special pivot-link compaction system for our Semat range.

Factor in our ISO 9001 accreditation, uncompromising customer support, vehicle hire, contract hire, parts and maintenance solutions, and we really are your one-stop solutions provider.

Refuse collection vehicles

➤ No fewer than 60 local authorities rely on CPD vehicles for their daily refuse collections.

If the proof of the pudding is in the eating, the proof of our acclaimed refuse and food waste collection vehicles lies in the many thousands of miles, compaction cycles and bin collections reliably clocked up each year across the UK.

Take our Titan 2406 low-level bin lifter, for example. It offers a seven-second lift cycle time, an exceptionally short overhang and pedestrian-friendly inflatable barrier arms.

Or consider our Semat refuse body. Designed to fit onto any chassis, it is available in multiple sizes and, again, offers a very short rear overhang.

Add the fact that all our innovations are rigorously tested in the most demanding of working environments before being incorporated into our designs, and it's easy to see why you can count on CPD.

"We have both purchased and rented a number of municipal vehicles from CPD. Their knowledge and genuine passion for the industry is second-to-none and has made doing business with them a very satisfying experience."

**Cliff Brown, Blackburn
with Darwen Borough Council**

TITAN
REFUSE COLLECTION VEHICLE

UP TO 20-30% REDUCTION ON FUEL CONSUMPTION PER VEHICLE

890 RPM OPERATING SPEED FOR REDUCED NOISE

REDUCED CARBON EMISSIONS BY UP TO 375KG/5

14 SECOND COMPACT CYCLE FOR INCREASED EFFICIENCY

890 RPM FOR NOISE REDUCTION

Titan refuse collection vehicles

➤ **Delivering fuel savings of as much as 15%, Titan is clearly a more environmentally friendly way of keeping Britain tidy.**

Attention to detail has always been the hallmark of CPD. Take the Titan RCV for example.

Robust, aesthetically pleasing – and with a low-maintenance compaction unit – the Titan XLS body is capable of handling all waste streams.

With five pre-set compaction ratios built into its operating software, Titan is sufficiently versatile to collect domestic waste, green waste, trade waste, paper waste and recycled materials.

Thanks to 'next generation' hydraulics, Titan's 14-second compaction cycle (the industry standard is 18 – 22 seconds) reduces collection time.

Requiring only 890rpm to drive the compaction process, Titan's compaction cycle is also particularly quiet at 65dB(A).

Delivering resultant fuel savings of as much as 15%, Titan is clearly a more environmentally friendly way of keeping Britain tidy.

And because functionality is just as important as efficiency, Titan's cab control screen provides a host of vital information for operators – including bin counter, unloading procedure and rear view camera.

Add a choice of capacities from 16m³ to 27m³ and there's a Titan variant to suit your requirements.

Titan 2406 bin lifter

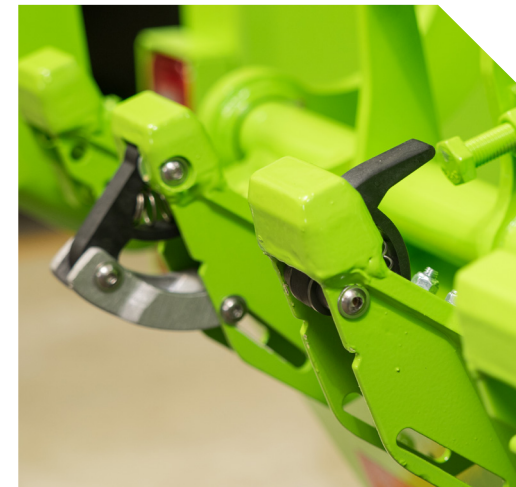

➤ The Titan 2406 low-level bin lifter raises efficiency and capability to a whole new level.

Titan bin lifters offer minimal overhang, enhanced loading efficiency and high safety standards, while a powered rave plate ensures that sacks and bulky items can be handled safely and efficiently.

A seven-second lift cycle accelerates collections. The loading of bulky items is made easier thanks to a full body width design and a higher payload weight is achieved due to an extremely tough yet low weight lifter.

Better manoeuvrability is achieved thanks to the Titan lifter's exceptionally short overhang.

Putting safety first, the system's patented inflatable barrier arms have been developed to significantly reduce damage costs and enhance both operator and public safety.

Semat refuse collection vehicles

➤ With gross vehicle weights from 10 tonnes to 32 tonnes, the Semat range of pivot-link rear-loaders will easily meet all your collection requirements.

At CPD, we have been building RCVs with Semat Cargopac bodies since 1996. Indeed, for many of our municipal customers, the flexibility that Semat offers makes it the only choice.

Constructed to the exacting standards we are recognised for, Semat RCVs require an absolute minimum of servicing and maintenance.

Produced in multiple heights, widths and lengths, Cargopac bodies can be fixed onto any type of chassis. Put simply, with Semat Cargopac we can build the precise RCV you need.

With excellent manoeuvrability, a wide range of sizes, a compacting system that only generates 75dB(A) of noise, and the flexibility to accept all bin lifts, Semat is equally suited to urban and rural waste collection rounds.

"Not only is our Semat RCV one of the most productive RCVs we've had the pleasure of working with, but four years after purchase, it has yet to miss a beat. We couldn't have asked for a more reliable piece of equipment."

Neil Sharp, EIS Waste Services

Ecopac food waste vehicles

➤ **The Titan Ecopac is ideal for satellite collections, and its compact wheelbase provides easy operation.**

Built to the same exacting standards as our Titan and Semat RCVs, the Ecopac is ideally suited to food waste collections along narrow lanes, as well as in busy towns and city centres.

Available in capacities from 6m³ to 8m³ and with payloads up to 3,500kg, Titan Ecopac vehicles feature a rear-loading mini-compactor and a 'tipping' discharge system.

Rear bin lift options range from 80 litres to 750 litres, and the Ecopac's compact wheelbase and narrow body ensure easy operation.

Manual and automatic compaction cycles and an articulated single-blade compacting system provide highly efficient loading, while the compaction system's reverse capability assists with waste discharge.

Standard features include PLC control of Ecopac functions, CCTV system with 7-inch colour screen and rear camera, PTO digital counter and 'man present' button for lift container use.

Telstar road maintenance vehicles

➤ Designed with the driver in mind: Telstar's easy-to-use gritting control with 7-inch colour screen.

Few would disagree that when it comes to winter road maintenance, Telstar gritters are more than worth their salt.

Since 2009, the year in which we acquired the Telstar brand, we have listened to users, taken their comments on board, invested heavily and worked hard to ensure that Telstar leads the way in terms of reliability and ease of use.

Benefiting from the latest design and manufacturing techniques, today's Telstar salt spreaders are available with either fixed or demountable bodies in sizes from 3m³ to 9m³ and equipped with a low trajectory spinner as standard.

High quality corrosion resistant techniques are used in every Telstar build. Spinner assemblies are fully galvanised. Anti-bridging sections are constructed from stainless steel. And intelligent design touches, such as full body width platforms with staircase ladders and ISO-standard hand rails, help ensure operator safety – whatever the weather.

Thoughtfully positioned hydraulics and electrics combine to make ownership easy, while Telstar's driver-friendly control box provides fingertip control of all operational functions and can be linked to options such as telematics, GPS, route optimisation and automated spreading systems.

Short-term, spot and contract hire

Whether you need one or more vehicles for a day or two to cover breakdowns or you require a longer-term hire arrangement, look no further than CPD.

Aware that every customer operates differently, we offer a variety of hire solutions, including spot, short-term, long-term and contract hire, as well as a unique 'late availability' emergency hire service.

Our extensive 'municipal and highway support' hire fleet includes refuse collection vehicles, gritters, road sweepers and crash cushions.

Always working hard to ensure you get the right vehicles at the right price – and there to assist you throughout the hire period – our hire support desk is only a phone call away.

At CPD, we never adopt a 'one size fits all' approach when arranging contract hire.

Understanding that no two customers will ever have quite the same contract hire needs, we specialise in providing tailored, highly cost-effective solutions.

Calling on our many years of industry knowledge and expertise, we'll take the time to fully understand your operating and budgetary requirements, all so we can deliver the precise solution you need.

- ***Planned fixed monthly cost***
- ***No unexpected maintenance bills***
- ***Protection from rising costs due to inflation***
- ***Dedicated qualified technical team to deal with any vehicle issues***

Contract hire from CPD means the right vehicles for the job and the right funding package.

Our outstanding fleet support services will be on hand throughout the life of your contract, while our full vehicle management services, using our highly trained engineers, take contract hire to the next level and include all aspects of maintenance for complete peace of mind.

Contract maintenance

Contract maintenance from CPD is the ideal way to make sure your vehicles and equipment are reliable and ready to work whenever you need them.

Smoothing out the ups and downs of vehicle service and repair costs and replacing them with the convenience of regular planned payments, our comprehensive contract maintenance agreements cover all aspects of vehicle service, repair, maintenance and breakdown.

Available for CPD contract hire vehicles and operator-owned vehicles, we offer a choice of maintenance programmes, with all work carried out by our nationwide network of highly trained engineers.

- ***Ability to work across the full vehicle including all equipment***
- ***General preventative maintenance***
- ***Scheduled safety inspections carried out on time***
- ***Warranty control***
- ***Identification of repeat issues***
- ***Vehicle MOT preparation and presentation***
- ***LOLER testing***
- ***Tyre management***
- ***24-hour breakdown service and roadside assistance***
- ***Full vehicle diagnostics***
- ***Vehicle wash facility***

Workshop management

Letting CPD manage your workshop can reap real dividends – with reduced maintenance costs, greater service levels, accurate reporting and faster repairs.

Freeing you up to concentrate on running your fleet, our comprehensive workshop management service can be tailored to suit your most specific needs.

- **Cost-effective management of your workshop facilities**
- **Highly trained CPD engineers and technicians available if required**
- **Vehicle and workshop problems quickly identified and resolved**
- **Maintenance and repairs scheduled around your operating requirements**
- **Full vehicle repair and maintenance history**
- **Comprehensive breakdown and accident management**
- **Regular safety, first-use and return-to-use inspections**
- **Periodic Maintenance Inspections (PMIs) and MOTs**
- **Rapid response to issues highlighted by drivers**
- **Tachograph calibrations and checks**
- **Maintenance of tail lifts, compacting and tipping systems etc**
- **Health & Safety management**

Spare Parts and consumables

At CPD, we don't believe in downtime. That's why we offer one of the most comprehensive spare parts services you'll find anywhere – with more than 6,000 spare parts, components and consumables always in stock. All to ensure we have precisely what you need to keep your vehicles running.

Offering advice and guidance across our entire range of products, our highly trained parts team has the knowledge and expertise to solve all your enquiries quickly and efficiently – from brake pads and bulbs to major components.

Add guaranteed next day delivery to anywhere in the UK (and more often than not same-day service) and you can count on CPD to keep you on the road.

- ***All your light and heavy commercial vehicle parts requirements***
- ***100% parts stockholding for CPD-supplied vehicles***
- ***OEM solutions whenever available***
- ***Guaranteed next day delivery***
- ***Exceptionally competitive prices***
- ***Technical specification sheets***
- ***Accurate component ID from vehicle registration***
- ***Everyday workshop consumables***

After-sales client care

At CPD we're renowned for providing the highest levels of after-sales support and care.

Buy or lease your vehicles from us and we'll never be more than a phone call away to help and advise on all aspects of running and maintaining your CPD fleet.

Our technical team can often resolve operational issues over the phone – and we always stock parts and consumables for all our vehicles.

We have a nationwide network of service centres and maintenance vans and, depending on where a breakdown occurs, we aim to attend the vast majority of call outs in around an hour.

- ***Industry-leading knowledge and technical expertise***
- ***24/7 breakdown support***
- ***Nationwide network of service centres***
- ***Maintenance fleet equipped to deal with the most common faults***
- ***Extended warranties available***
